

Three Truths & Several Lies About Blended Learning

October 11, 2021

RAISE
YOUR HAND TEXAS

 @RYHTexas

- To raise awareness about blended learning
- To highlight the growth of blended learning within the state of Texas
- To demonstrate its effectiveness as an instructional tool

Blended Learning: True or False?

Is a technology program

Encourages teachers to reevaluate their practice around differentiation & personalization

Blended learning only works well at elementary

Is good teaching practice

Blended learning leads to increased student & teacher engagement and agency

Should only be used in core content (ie. tested subjects)

Blended learning — the heavy lift is the planning, execution is easier

Indicators of Success: Student Achievement

In Year 3, early analyses of Raising Blended Learners impact have shown significant improvement across nearly all schools and districts and in both academic and non-academic areas. Some highlights from these results include the following:

- In the 2017–18 school year, 98 percent of all RBL schools met state academic standards.
- More than half of all RBL campuses received at least one academic distinction, with some campuses achieving as many as six distinctions.
- Students in RBL schools are more likely to be collaborative, to seek help if they are struggling, and to have better relationships with their teachers.
- 76 percent of RBL teachers report that they enjoy their jobs more since incorporating personalized blended learning into their classrooms.
- 84 percent of teachers reported believing more strongly that ALL students can learn due to personalized blended learning.
